Greetings to the Hiring Team at Nokia,

I am excited to apply for the Software Test Automation Co-op/Intern position at Nokia for the September 3 - December 20 work term. My hands-on experience in software development, particularly in test automation and infrastructure development, aligns closely with your requirements.

At Manitoulin Transport, I enhanced our test automation infrastructure by programming new capabilities such as test validation methods and debugging utilities using JavaScript and Python. I translated test requirements from testers into functional test scripts, directly aligning with your needs for NodeJS/Mocha test automation infrastructure development.

I also migrated the company's internal management website to a microservices architecture, involving significant work with networking protocols and connectivity. My familiarity with Linux was crucial in ensuring smooth deployment and maintenance, matching your requirement for developing connectivity to devices via specific networking protocols.

Additionally, my experience with Git, NodeJS, Mocha, and Selenium, combined with a strong understanding of object-oriented software design, makes me well-suited for this role. I am adept at prototyping new ways to test specific scenarios, focusing on system robustness, and performing deep data mining for test management.

Nokia's commitment to innovation and inclusion is inspiring. I am eager to contribute to your team by leveraging my skills in software test automation and infrastructure development. I am available for the 4-month work term and look forward to discussing how my background and experiences align with Nokia's needs.

Thank you for considering my application. I can be reached at (437)-982-0816 or ysuo7@uwo.ca.

Yours sincerely,

Yinglun(Leo) Suo
